

DOLOMIA PREMIUM LINE

PURE
Excellence

DOLOMIA water born in a natural paradise...

A pristine environment in which the nature gives spectacle and invites to dive: the **FRIULIAN DOLOMITES NATURAL PARK**. It is a corner of paradise, a heritage of all humanity whose integrity is protected and preserved.

In this setting we find Dolomia, the natural mineral water that springs within a **UNESCO WORLD HERITAGE SITE**.

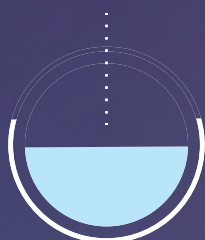

Dolomia natural mineral water springs from the rock of the Eastern Dolomites, in Val Cimoliana, at 833 mamsl, in a **PROTECTED AREA** of great geological interest, with a magnificent variety of unique and safeguarded flora and fauna.

water filtration

2703 mamsl
Cima Preti

950 mamsl
hydrogeological
basin

833 mamsl
source

The deepest layers of perennial snows melt on the Cima dei Preti mountain group at 2703 mamsl, causing water to slowly filter through the dolomite rock, forming an uncontaminated, ancient and huge hydrogeological basin underneath the mountain.

basin and source

Water continuously flows into the hydrogeological basin, lying in contact with the dolomite rock for many years, absorbing its most precious minerals and oxygen.

NEW LINE Premium

Dolomia is today a renewed brand:
identity is expressed through a contemporary logo,
in which lettering and the icon of the basin
are characterized by **elegance and premiumness**.

The brand color is **Enrosadira**, the pink colour that the Dolomites
take at sunset. This color guarantees a high **distinctiveness**
on the shelf and consistency with the origin of the water.

The new bottle interprets an **ergonomic** and solid shape,
like the rock to which it is inspired, which protects
and best preserves this **extraordinary water**.

**POCKET
SIZE!**

DOLOMIA WATER

its 'values'

rich in good minerals

CALCIUM Ca ²⁺ 27.4 mg/L	It is characterised by a good concentration of calcium, an essential element for bone structure and vital for physiological processes .
MAGNESIUM Mg ²⁺ 14.7 mg/L	It guarantees an excellent supply of magnesium, a mineral that contributes to the maintenance
BICARBONATE HCO ₃ ⁻ 157 mg/L	and saline reintegration in those who carry out physical activity.

very palatable

pH 8,1	Dolomia water's optimum alkaline pH is useful for reducing the acidity in the human body , as well as making it very palatable.
---------------	--

light

DRY RESIDUE (TDS) 114 mg/L	Its low dry residue, together with its balanced mineral composition, makes Dolomia water pleasant to drink and particularly suitable as part of your daily diet, encouraging diuresis and eliminating uric acid.
--------------------------------------	--

pure

ARSENIC As <0,001 mg/L	The near-total absence of arsenic proves the exceptional purity of Dolomia water.
----------------------------------	--

ideal for life of both children and adults

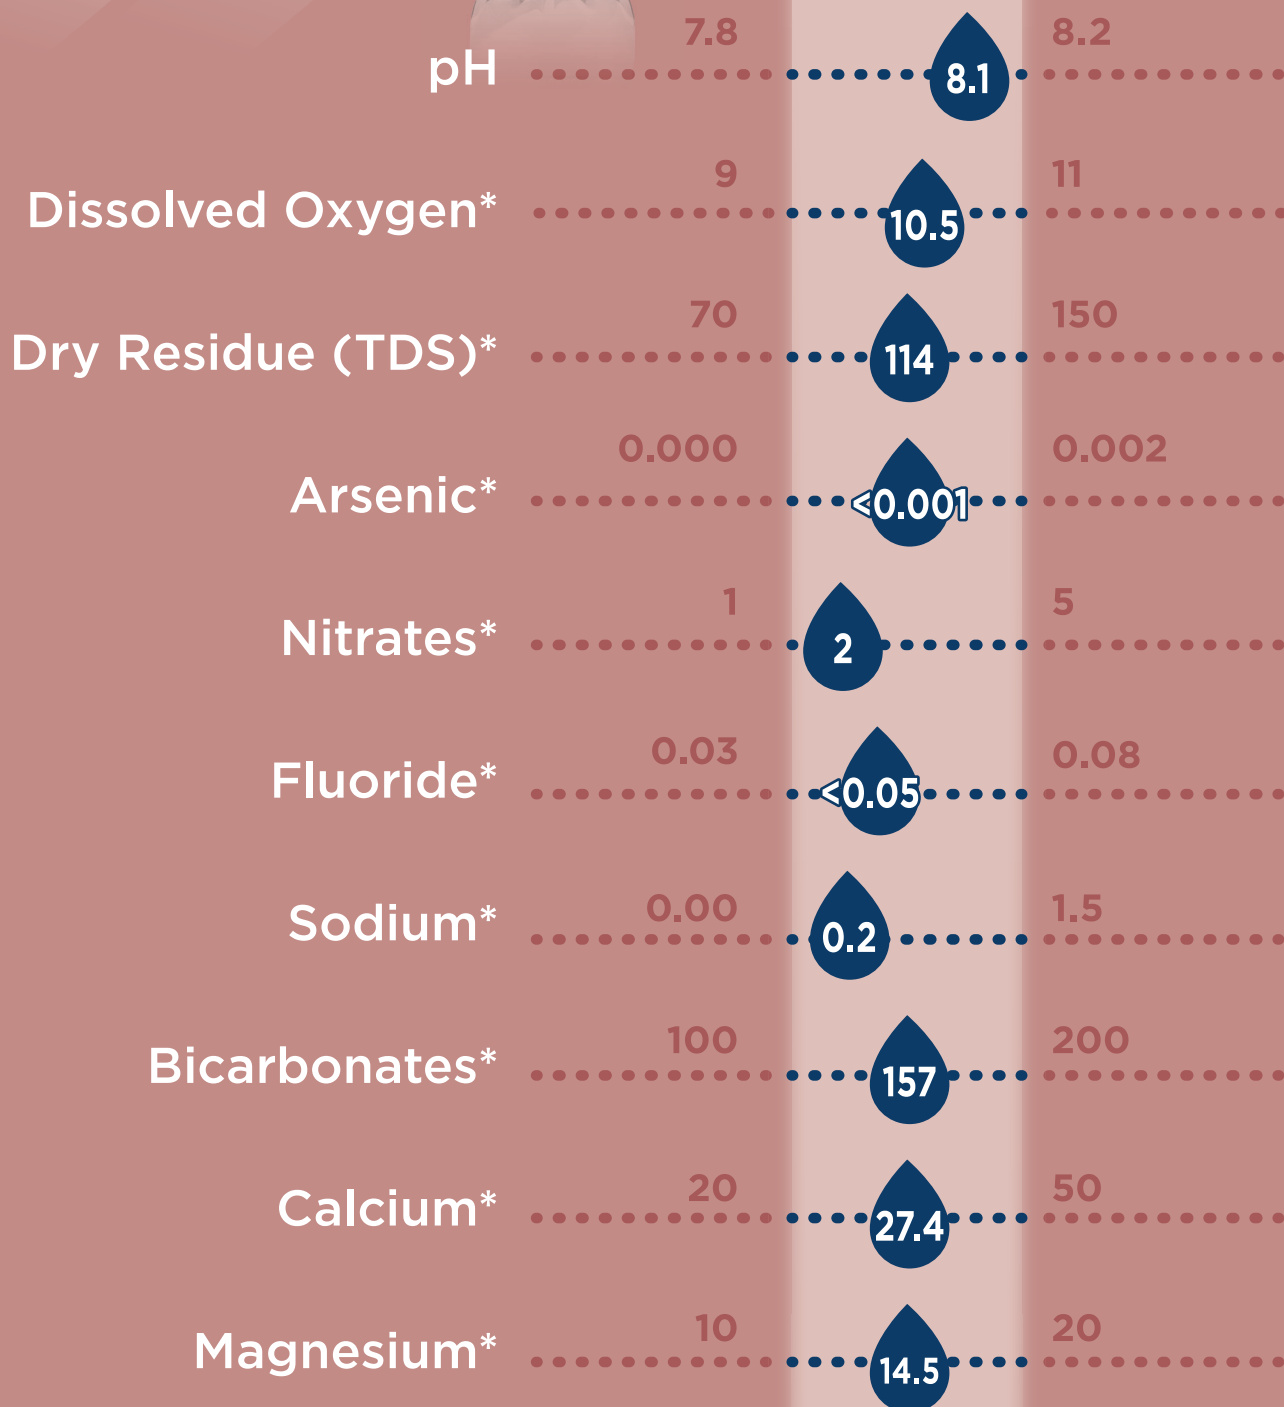

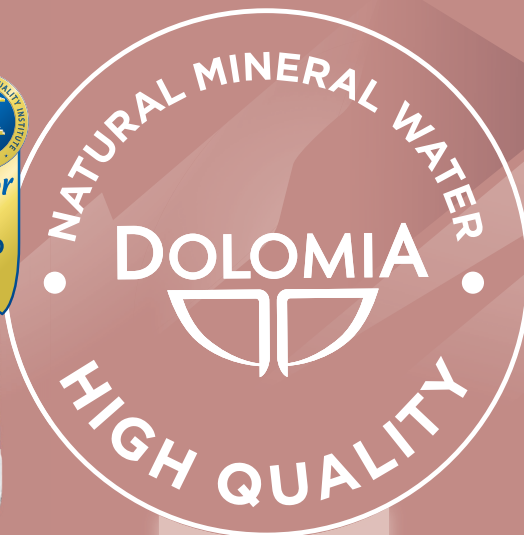

NITRATES NO ₃ ⁻ 2 mg/L	The purity of Dolomia water is reflected also by its low nitrate content
--	---

revitalizing

DISSOLVED OXYGEN O ₂ 10.5 mg/L	Dolomia mineral water stands out due to its high level of dissolved oxygen – 10.5 mg/L – one of the highest values in the mineral water market. Oxygen leads to an improvement in our general wellbeing, has an energizing effect and has specific beneficial effects on many of the human body's organs.
---	--

with the lowest sodium content

SODIUM Na ⁺ 0.2 mg/L (0.00002%)	Thanks to its exceptionally low sodium content, it is the water most "recommended for low-sodium diets" and for the prevention of water retention. There are no consumption limits when recovery is required due to sweating.
